Wright, R. D., *see* Morris, R.

SUBJECT INDEX

Acids, organic, the chromatographic separation and identification of, and their application to yeast (Ladd and Nossal), 523.

Aconitase, the influence of buffers on the pH optimum of (Morrison), 877.

Aconitase, the kinetics of the reactions catalyzed by (Morrison), 867.

Aerobacter aerogenes, the separation of a cytochrome containing fraction from (Moss), 571.

Albumen, commercial dried egg, as a protein source for the growing rat (Cahn), 819.

Alloxan diabetes *see* Diabetes, alloxan.

Anaemia, cardiovascular response to, in the unanaesthetized rabbit, an analysis of some factors in the (Smith), 783.

Anaemias, haemorrhagic, the changes in cardiac output, right atrial pressure and blood volume in, in unanaesthetized rabbits (Smith and Simmonds), 241.

Anoxia, acute, cardiac output in, in unanaesthetized rabbits (Korner), 511.

Antibacterials, the toxicity of some, for bull, ram, rabbit and human spermatozoa (White), 41.

Antigens, red cell, *see* Red cell antigens.

Aspartic acid, deamination of, by *Proteus* X-19. 3. Effect of K^+, Na^+ and pH on deamination by whole cells (Trudinger), 85.

Bacterial metabolism, *see* Metabolism, bacterial.

Blood and plasma volumes of normal Australian females (Steinbeck), 95.

Blood, the flow of, in narrow tubes.

1. A capillary microphotometer: an apparatus for measuring the optical density of flowing blood (Taylor and Robertson), 721.

Blood group Tj^a, the human (Walsh and Kooptzoff), 387.

Blood pressure, the effect of pituitary posterior lobe extracts on the, of the fowl (Strahan and Waring), 193.

Blood pyruvate, the effect of glucose on, in sheep (Jarrett and Potter), 757.

Body water and electrolyte changes in bilaterally nephrectomized sheep (McDonald, Coats and Munro), 275.

Calcium carbide, "freeze-drying" with (Holden), 893.

Calves, congenital lymphatic oedema in Ayrshire (Morris, Blood, Sidman, Steel, and Whitten), 265.

CAMP factor, some factors influencing the production of, by *Streptococcus agalactiae* (Pulsford), 353.

Carbohydrate metabolism, *see* Metabolism, carbohydrate.

Carbon tetrachloride poisoning, studies in.

1. The detection and estimation of creatine and related compounds (Eden, Harrison, and Linnane), 333.
2. The effect on creatine metabolism (Eden, Harrison and Linnane), 341.

Cardiac output in acute anoxia in unanaesthetized rabbits (Korner), 511.

Cardiac output in normal unaesthetized and anaesthetized rabbits (Korner and Darian Smith), 499.

Cattle, "tall fescue lameness" in, pharmacological studies of grasses obtained from a property where [this] lameness occurs (Trethewie, Gaffney and Gladwell), 207.

Cobalt, *see under* Vitamin B_{12}-activity.

Complement fixation and complement fixation inhibition using certain avian sera, observations on (Miles), 57.

Coxsackie viruses, *see* Viruses, Coxsackie.

Diabetes, alloxan, in a marsupial (*Trichosurus vulpecula*), observations on carbohydrate metabolism and (Adams and Bolliger), 101.

Encephalitis, Murray Valley, (X disease), infection of birds with (Miles), 69.

Encephalitis virus, *see* Virus, encephalitis.

Eosinopenia, the influence of reticuloendothelial blockade on hormone induced (Hudson), 689.

Eperythrozoon coccoides Schilling, observations on infection of mice with (Derrick, Pope, Chong, Carley and Lee), 577.

Erythrocytes, ruminant, a corynebacterial agent which protects, against staphylococcal β toxin (Petersen), 361.

Erythrocytes treated with staphylococcal β toxin, factors affecting the lysis of (Pulsford), 347.

Fat absorption, the interrelations of the plasma and lymph lipide fractions before and during (Morris), 763.

Fatty acids, short chain saturated, observation on the metabolism of, by guinea-pig caecal tissue (Hagen and Robinson), 129.

"Freeze-drying" with calcium carbide (Holden), 893.

Fungi and yeasts, the screening of 117 cultures of, for antiviral and antibacteriophage activity (Fastier), 421.

Glomerulus, renal, *see* Renal glomerulus.

Grasses obtained from a property where "tall fescue lameness" in cattle occurs, pharmacological studies of (Trethewie, Gaffney and Gladwell), 207.

Haemoglobin, on the interaction of, with sodium and potassium (Morris and Wright), 669.

Haemolytic disease of the newborn, the rôle of tissue antigens in (Brading and Walsh), 213.

Hair, non-keratins of human head (Bolliger and Gross), 739.

Hepato-encephalomyelitis virus, *see* Virus, hepato-encephalomyelitis.

Herpes simplex virus, *see* Virus, herpes simplex.

Histamine, the influence of TAB vaccine on the toxicity of, and related phenomena (Trethewie), 79.

17-hydroxycorticosterone (compound F), the effects of, on human eosinophils (Hudson), 601.

Influenza B strains, recombination with two, in the de-embryonated egg (Perry, van den Ende, and Burnet), 469.

Influenza, studies in experimental immunology of.

X. Passive immunity and its enhancement (Fazekas de St. Groth and Graham), 369.

Influenza virus, an analysis of the adaptation of an, to produce lesions in the mouse lung (Burnet and Lind), 711.

Influenza virus, the effect of desoxyribonucleic acid inhibitors upon the replication of (Stevens), 187.

Influenza virus, heat inactivated, reactivation of, by recombination (Burnet and Lind), 133.

Influenza virus, the nucleic acid content of (Ada and Perry), 453.

Influenza virus strains, recombination between neurotropic and non-neurotropic (Lind and Burnet), 437.

Influenza virus, studies on the soluble complement fixing antigens of.

3. The nature of the antigens (Ada and Perry), 179.

Influenza viruses, the limited growth of, in the mouse brain (Cairns), 123.

Influenza viruses, recombination of, in the de-embryonated egg.

1. The use of periodate-treated sera for *in vitro* characterization of influenza virus strains (Burnet and Lind), 145.
2. The conditions for recombination and the evidence for the possible existence of diploid influenza virus (Burnet and Lind), 153.

Insulin, studies with radio-iodinated (Rose and Nelson), 429.

Iron metabolism, *see* Metabolism, iron.

Lipide fractions, plasma and lymph, the interrelations of the, before and during fat absorption (Morris), 763.

Liver protein, on the interaction of ^{32}P with and its removal from denatured (Ennor and Rosenberg), 701.

Lymph flow and protein composition, an analysis of factors affecting, during gastric absorption of food and fluids, and during intravenous infusion (Korner, Morris and Courtice), 301.

Lymph flow and protein dynamics, the effects of acute anoxia and nor-adrenaline vasoconstriction on, following transfusions of Ringer-Locke solution (Korner and Courtice), 321.

Lymph flow, the effect of fluid, electrolyte and food intake on thoracic duct, in unanaesthetized rats (Simmonds), 285.

Metabolism, bacterial, investigations on glucose catalysis in.

1. Pyruvate metabolism in *Lactobacillus arabinosus 17-5* (Hunt and Nossal), 533.

Metabolism, carbohydrate, and alloxan diabetes in a marsupial (*Trichosurus vulpecula*), observations on (Adams and Bolliger), 101.

Metabolism, iron, intermediary, studies on (Kaldor), 795, 801.

Metabolism, iron, studies on intermediary.

IV. Haemoglobin value, serum iron and iron binding capacity in normal and castrated rats (Kaldor), 437.

Motility in man, gastric, duodenal and jejunal; physiological studies by balloon-kymography (Andrew), 479.

Murray Valley encephalitis, *see* Encephalitis, Murray Valley.

Mycobacterium ulcerans and *Mycobacterium balnei*, studies on.

3. Growth in the semi-synthetic culture media Dubos and drug sensitivity *in vitro* and *in vivo* (Leach and Fenner), 835.

Myxomatosis, protection of laboratory rabbits against, by vaccination with fibroma virus (Fenner and Woodroofe), 653.

Oedema, congenital lymphatic, in Ayrshire calves (Morris, Blood, Sidman, Steel and Whitten), 265.

Oedema, pulmonary, the experimental production of, in unanaesthetized rats, by means of intravenous infusions of Ringer-Locke solutions, plasma and blood (Courtice, Harding and Korner), 563.

Oestrone, the effect of body weight and age at ovariectomy, on the response of mice to (Biggers and Claringbold), 33.

Organic acids, *see* Acids, organic.

Oyster spermatozoa, *see* Spermatozoa, oyster.

Pancreas, a morphological study with the electron microscope of sections of the normal mouse (Robertson), 229.

Pancreatic lesion in adult mice infected with a strain of pleurodynia virus.

1. Electron microscopical observations (Robertson), 393.
2. Virus titres in the pancreas and their correlation with blood virus levels and morphological changes (Dineen), 489.

Phosphorus, lipid, determination of, in ultramicro quantities of serum (Brown), 689.

^{32}P, on the interaction of, and its removal from denatured liver protein (Ennor and Rosenberg), 701.

Photosynthesis, the point of the inhibitory action of the iodoacetyl radical on (Fraser), 49.

Pituitary posterior lobe extracts, the effect of, on the blood pressure of the fowl (Strahan and Waring), 193.

Plasma and blood volumes of normal Australian females (Steinbeck), 95.

Pleurodynia virus, *see* Virus, pleurodynia.

Poliomyelitis virus, *see* Virus, poliomyelitis.

Protein composition, and lymph flow, an analysis of factors affecting, during gastric absorption of food and fluids, and during intravenous infusion (Korner, Morris and Courtice), 301.

Protein dynamics and lymph flow, the effects of acute anoxia and nor-adrenaline vasoconstriction on, following transfusions of Ringer-Locke solution (Korner and Courtice), 321.

Prothrombin-fibrinogen complex and its relation to prothrombin estimations (Lyons), 113.

Red cell antigens, the deterioration during storage of (Kooptzoff), 695.

Renal glomerulus of the mouse, observations on the structure of the, revealed by the electron microscope (Reid), 235.

Renal insufficiency, the adsorptive capacity of serum proteins in (Breyer and Radcliff), 411.

Salmonellas, lysogenicity and lysis patterns in the.

2. Further tests with S. *adelaide* (Atkinson and Klauss), 221.

Serum, determination of lipid phosphorus in ultramicro quantities of (Brown), 677.

Serum proteins in renal insufficiency, the adsorptive capacity of (Breyer and Radcliff), 411.

Sheep, the determination of vitamin B_{12}-activity in the organs and excreta of.

1. Microbiological assay methods (Dawbarn and Hine), 1.

Skin flakes, non-keratins of avian and mammalian (Bolliger and Gross), 747.

Sorbitol, the antiketogenic action of, in rats (Todd), 827.

Spermatozoa, oyster, the metabolism of.

2. The effect of malonic acid and esters of substrates (Humphrey and Jeffrey), 583.
3. The separation and metabolic properties of sperm heads and tails (Humphrey and Pollak), 587.
4. The effect of low pH on oyster spermatozoa (Humphrey and Pollak), 593.
5. The effect of glycine (Jeffrey), 807.
6. The effect of metals (Jeffrey), 813.

Spermatozoa, the toxicity of some antibacterials for bull, ram, rabbit and human (White), 41.

Streptococcus agalactiae, some factors influencing the production of CAMP factor by (Pulsford), 353.

TAB vaccine, the influence of, on the toxicity of histamine and related phenomena (Trethewie), 79.

Thrombin formation and yield in shed blood in relation to thromboplastins and prothromboplastins (Fantl), 853.

Tissue antigens in haemolytic disease of the newborn, the rôle of (Brading and Walsh), 213.

Uroporphyrins.
3. Crystalline uroporphyrins from normal human urine (Lockwood and Bloomfield), 733.

Vaccinia virus, *see* Virus, vaccinia.

V. cholera (RDE), action of the receptor destroying enzyme of, in guinea-pigs (French and Ada), 165.

Virus, encephalitis, Japanese B, a study on the haemagglutinin of the Nakayama strain of (Austin), 885.

Virus, hepato-encephalomyelitis (HEV), studies on the (Stanley, Dorman and Ponsford), 543.

Virus, herpes simplex, the complement fixing antigen of (Wildy and Holden), 621.

Virus, herpes simplex, the growth of (Wildy), 605.

Virus, influenza, *see* Influenza virus.

Virus, pleurodynia, the pancreatic lesion in adult mice infected with a strain of.
1. Electron microscopical observations (Robertson), 393.
2. Virus titres in the pancreas and their correlation with blood virus levels and morphological changes (Dineen), 489.

Virus, poliomyelitis in tissue culture, the growth of.
1. The use of a stationary bottle technique (Bazeley and Thayer), 23.
2. Isolation and typing of poliomyelitis virus strains using a stationary bottle technique (Bazeley and Thayer), 29.

Virus, vaccinia, the growth curve of, on the chorioallantois (Anderson), 633.

Viruses, Coxsackie, studies of.
1. Comparison of age-susceptibility relationships in mice (Howes), 253.

Vitamin B_{12}-activity in the organs and excreta of sheep, the determination of.
1. Microbiological assay methods (Dawbarn and Hine), 1.
2. The influence of cobalt on the production of factors possessing vitamin B_{12}-activity in the rumen contents of sheep (Hine and Dawbarn), 641.

X disease, *see* Encephalitis, Murray Valley.

Yeasts and fungi, the screening of 117 cultures of, for antiviral and antibacteriophage activity (Fastier), 421.

Yeast, the chromatographic separation and identification of organic acids and their application to (Ladd and Nossal), 523.

THE GRIFFIN PRESS
